

A FLEXIBLE SERIALIZATION AND TRACK & TRACE SOLUTION FOR EVERY BUSINESS

VALUE

Kvinta is a modern, flexible SaaS solution that addresses the **traceability and serialization** needs of businesses throughout the supply chain in various industries. Kvinta integrates into the company's IT landscape, onboard supply chain partners, and reports to the government's systems, mitigating business risks and creating business opportunities.

KVINTA MAKES YOU T&T READY

"T&T ready" means being able to track all relevant activities that happen to physical units with a unique id as long as they reside within your responsibility, to identify their current status and location, as well as to trace their history, and to exchange such information with supply chain partners or authorities in case regulations require to do so.

KVINTA SAAS

Kvinta is a Software as a Service solution that operates at a corporate level to record, store, and allow the analysis of activities involving serialized data. There are different scenarios of Kvinta's application to business. From the extensive "Kvinta as a corporate Track & Trace repository" to the tailored "Kvinta Mobile as a warehouse solution" and others. For Kvinta, business needs are the first priority. Kvinta provides two professional interfaces working together and mirroring complex background processes in a user-friendly way.

Behind the scenes, Kvinta interacts with internal IT systems like WMS, ERP, and CRM and external actors like ID issuers, regulatory agencies, equipment providers, supply chain partners, contract manufacturers, logistic providers, and consumers.

A TRUE NEXT GEN SOLUTION

Traceability as a concept is nothing new. But the real and expected scale of its application together with the complexity of supply chains across markets - that what stand behind the challenge Kvinta is built to deal with. Kvinta is able to handle billions of messages with a growing size of every message from tens of thousands of parties. There are at least three reasons for Kvinta being a true next-gen solution for T&T.

CLIENT TESTIMONIALS

Our already long-term partnership with 3KEYS enables us to have smooth supply chain operations under a complex regulatory Track & Trace framework, such as EUTPD, new UK regulations, and others.

To implement the labeling project, we chose the 3KEYS team and the cloud solution KVINTA.

Working with 3Keys has been a transformative experience for us. With the Kvinta software, we can now track every box, bottle, and pallet, offering us unprecedented control and efficiency.

As an effective and modern solution, GAC Group chooses Kvinta for warehouse operations in the Middle East.

TOP INTEGRATION PARTNER

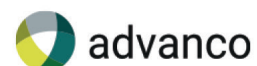

3Keys is well known in serialization and Track & Trace consulting, having successfully implemented international projects for multiple industries, such as pharmaceuticals, tobacco, and FMCG (the food industry). 3Keys is an expert in implementing Track & Trace, whether for legal compliance or brand protection.
