

KVINTA MOBILE. A TRACK & TRACE SOLUTION FOR WAREHOUSE OPERATIONS

Kvinta SaaS

Kvinta Mobile is a part of Kvinta Software as a Service solution that operates at a corporate level to record, store, and allow the analysis of activities involving serialized data. For Kvinta, business needs are the first priority. Kvinta provides two professional interfaces working together and mirroring complex background processes in a user-friendly way.

Behind the scenes, Kvinta interacts with internal IT systems like WMS, ERP, and CRM and external actors like ID issuers, regulatory agencies, equipment providers, supply chain partners, contract manufacturers, logistic providers and consumers.

Kvinta focuses on business needs and is used in various Track & Trace scenarios. These scenarios are not self-exclusive and depend on business needs.

WAREHOUSE MOBILE OPERATIONS

Kvinta Mobile is a native mobile application running on many compatible Android devices, whether it be consumer or rugged enterprise ones having high-performance barcode scan engines used in industrial facilities such as Manufacturing Plants, Logistics Warehouses or Distribution Centers. Kvinta Mobile seamlessly integrates with the Kvinta T&T Cloud Solution and can be easily setup and configured to work in any internet-enabled environment.

Kvinta Mobile application is used to record activities in the context of Track & Trace affected business operations. Among others, this includes inbound and outbound processes, such as goods receipt or goods issue, as well as internal warehouse activities like repackaging or destruction of damaged goods. Kvinta Mobiles' main differentiators are the ease of deployment and ease of use in real-life working environments.

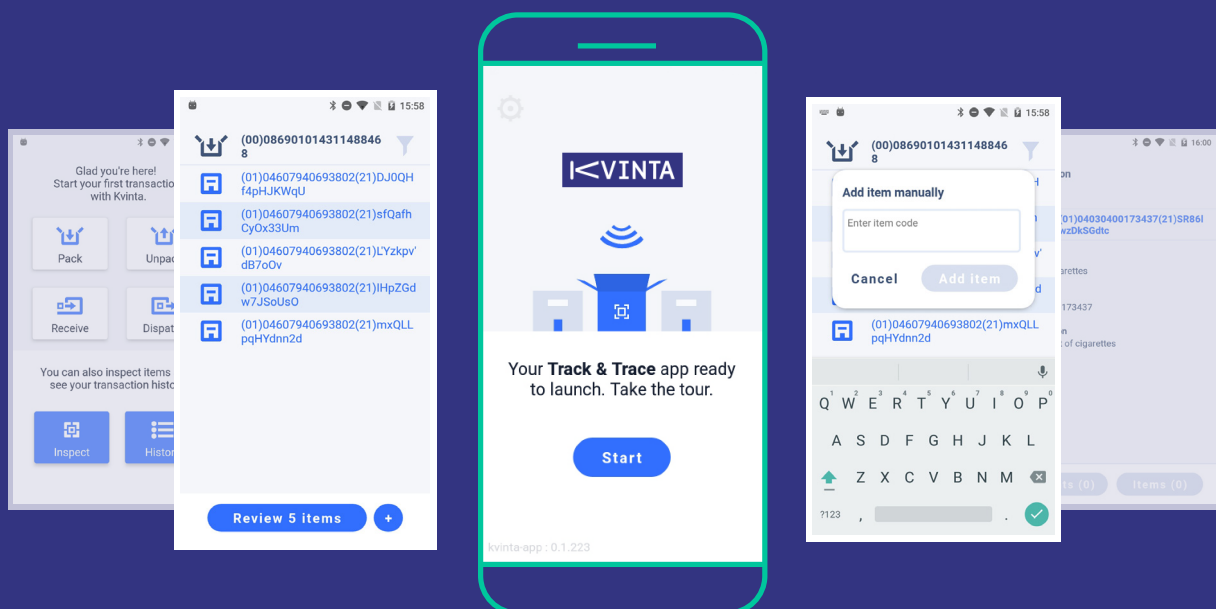

BUSINESS NEEDS

Where?

- Factory logistics
- Warehouses
- Production warehouses
- Distribution centres
- 3PL warehouses
- SalesRep depot and DSD
- Retail

When?

- A business does not have a fully automated logistic environment at warehouses and manufacturing facilities
- None or outdated hardware for scanning 2D barcodes
- Serialization and Track & Trace are important areas for business optimization or compliance
- Weak network connectivity at plants and facilities

Functionality of the Kvinta Mobile Solution depends on the business needs and can be tailored.

The basic functionality includes:

- Receiving / return
- Shipping
- Aggregation / pack
- Disaggregation / unpack
- Inspection
- Label printing
- Decommissioning / destruction / sampling

FEATURES:

Automated Reporting (L5)

During daily operations using Kvinta Mobile, the corresponding reporting (L5) is triggered automatically.

Zebra certified

Kvinta Mobile is a native mobile application running on many compatible Android devices, whether it be consumer or rugged enterprise ones having high performance barcode scan engines used in industrial facilities. Kvinta Mobile is certified by one of the global leaders of scanning equipment - Zebra Technologies.

Flexible integration options

Kvinta Mobile offers easy integration with customer IT systems through web services or even a file-exchange approach.

Support of global standards (GS1)

Kvinta Platform and Kvinta Mobile Solution support global standards and keep track of all the changes and innovations in the field.

Integrated business validations

Kvinta Mobile Solution allows real-time validation of the recorded activities against master data and related documents (delivery notes).

WHAT DOES KVINTA MOBILE BRINGS TO THE BUSINESS

Early problem Detection

The data validation feature detects T&T issues early on, preventing data inconsistencies, reducing required data corrections, and ensuring compliance.

Ease of use

Registering a device within the Kvinta Track and Trace Portal, initial installation on a device and updating to a new version is done within minutes to get you ready for operations. Your warehouse operators will need minimal training to accomplish the recording of warehouse activities required based on your track and trace scenarios.

Integration capabilities within warehouse

Kvinta Mobile offers multiple levels of integration with customer's WMS on demand: from low to high.

Opportunity to use cost-efficient scanning equipment

Kvinta is a flexible software solution that can work on a scanning device or mobile device with Android OS. It can be installed on your current devices in use. That helps to keep the integration costs low and cut the timing, since it needs minimal hardware requirements. Above that Kvinta Mobile Solution is a part of the Kvinta Track and Trace solution and can be used with the Kvinta Repository without additional cost for as many users as business needs.

Flexibility to future business-specific extensions

Kvinta's technologies and architecture make the solution as flexible as possible for future changes, additions, integrations and anything business might need in a fast-changing reality. The solution's customization is used to align the T&T system with the business processes of the customer.

FEATURES AND TECHNOLOGIES

Kvinta utilizes the latest technologies and the top experts' experience to meet the business requirements of tomorrow.
